Tour of a Legends of Runeterra card

If you're brand new to collectible card games, here's a quick primer to learn how to read the information on a card. See also: **Round FAQ** and **Keywords and Game Vocab**.

Here's *Gwen*–a champion that has two keywords (**Quick Attack** and **Hallowed**) and three pieces of game vocab (**Attack**, **Drain**, and **Level Up**).

In a tiny amount of space, here's what the card tells us about Gwen's abilities before she levels up (Note: Only Champion Cards level up):

KEYWORDS

Quick Attack: When this 3|4 Gwen attacks, because of her **Quick Attack**, she deals her 3 damage first, before her blocker can strike back (normally, strikes between attacker and blocker happen simultaneously, but **Quick Attack** prioritizes the attacking unit). If her blocker has 3 Health or less, she can successfully slay her blocker. Because her blocker is

now dead, it isn't around to deal damage back to her, so Gwen leaves combat unscathed; her Health remains at 4.

Hallowed: When units with Hallowed die, for the rest of the game when allies **attack**, the first (leftmost) attacker (regardless of whether they have the **Hallowed** keyword) gets "hallowed" this turn–that is, they will get +1|+0 that round, for each allied Hallowed unit that has died this game. For example, if 5 ally units with the Hallowed keyword have died so far this game, the leftmost attacker will be "hallowed" with +5|+0 that round.

GAME VOCAB

Attack: Because the highlighted **Attack:** text is present, an ability is triggered when Gwen attacks:

> Gwen gets the same additional Power as the leftmost attacking ally's bonus Power from Hallowed. Example: If 5 units with Hallowed died this game, and *Renekton* is in the leftmost attacking position, Renekton will get +5 Power as the leftmost attacker, even though he doesn't have the Hallowed keyword. Because an ally is getting that buff, Gwen gets it too–she's attacking as an 8|4 unit that round.

Drain: When she attacks, she also drains 2 from the enemy Nexus. That is, she deals 2 damage to the enemy Nexus and heals the ally Nexus for the same amount.

Level Up: Every champion has their own unique condition to level up in game. In Gwen's case, it's when she deals a total of 10+ damage.

Numbers and icons along the border:

Top left number in the blue circle: The mana cost to summon a card from your hand to put it in play on the board. Summoning Gwen costs 4 mana gems. (Note: In LoR, units can do combat in the same round that they are summoned.) See Mana.

Top right icon: The region the card belongs to. Gwen belongs to The Shadow Isles. Your deck can contain up to two regions. (Note: Origins on regionless Runeterran champions can bend this rule.)

Bottom numbers: The unit's attack Power (damage-dealing stat) is on the left and the unit's Health (defense stat) is on the right. Damage that a unit receives in battle persists to subsequent rounds, unless the unit has **Regeneration** or undergoes some other event or effect that removes any negative or positive buffs (like casting Spirit Journey, which revives the unit to its original state).

Lightning bolt icon: When Gwen is in play, you'll also notice a lightning bolt icon. This generic trigger icon just means that the card has a trigger that an opponent may want to look at.

The card tells us all that, in much fewer words. Ah, word economy!
