About this writing sample: I wrote both the internal workflow and external process for this one (the external process is reflected here).

To make a useful guide and hopefully reduce frustration, I asked most of the questions resulting in the contents of this draft.

I foresaw that a content creator using Riot Music might not necessarily play Riot games (and what to do if they do not have a Riot Account, since I knew that writing a ticket requires login).

Riot Music Claims/Strikes

September 18, 2024 at 4:59 PM

How to Remove a Copyright Violation for Videos that Use Creator-Safe Riot Music

If you received a claim or strike on content you published using Creator-Safe Riot music, send us some details and we'll take a look.

First, check that you've followed all of Riot Music's Rules and Guidelines.

Then, send us a ticket under the **Account Management** category with the following information:

- **Your channel name**
- **Date that the video went live**
- **Is this a copyright claim or strike?**
- **Screenshot/image of the violation**
    - Be sure it's clear whether the claim came from Riot Games
- **Song Name**
- **Link to the video that got flagged for the violation**
    - Note: If your video got removed, still give us a link to that video!
- Brief description of the violation or any other info you want to provide about this claim or strike.

Note: Submitting a ticket requires signing in with a Riot Account. If you don't have a Riot Account, you can reach out to **@riotgamesmusic** on socials for help with your claim or strike.

Once you send us these details, our music team will investigate. Please note that a resolution can come pretty quick or can take weeks depending on the nature of the issue.

About this writing sample: TCGs can be overwhelming for new players. Thought an in-depth intro to reading a single card could help.

Went through SME review but zero editing or peer review before publishing—just to provide an example of my raw writing.

Tour of a Legends of Runeterra card

February 2, 2023 at 5:36 PM

If you're brand new to collectible card games, here's a quick primer to learn how to read the information on a card. See also: **Round FAQ** and **Keywords and Game Vocab**.

Here's *Gwen*–a champion that has two keywords (**Quick Attack** and **Hallowed**) and three pieces of game vocab (**Attack**, **Drain**, and **Level Up**).

In a tiny amount of space, here's what the card tells us about Gwen's abilities before she levels up (Note: Only Champion Cards level up):

Keywords

- **Quick Attack**: When this 3|4 Gwen attacks, because of her **Quick Attack**, she deals her 3 damage first, before her blocker can strike back (normally, strikes between attacker and blocker happen simultaneously, but **Quick Attack** prioritizes the attacking unit). If her blocker has 3 Health or less, she can successfully slay her blocker. Because her blocker is now dead, it isn't around to deal damage back to her, so Gwen leaves combat unscathed; her Health remains at 4.

- **Hallowed**: When units with Hallowed die, for the rest of the game when allies **attack**, the first (leftmost) attacker (regardless of whether they have the **Hallowed** keyword) gets "hallowed" this turn–that is, they will get +1|+0 that round, for each allied Hallowed unit that has died this game. For example, if 5 ally units with the Hallowed keyword have died so far this game, the leftmost attacker will be "hallowed" with +5|+0 that round.

Game Vocab

- **Attack**: Because the highlighted **Attack:** text is present, an ability is triggered when Gwen attacks:
    - Gwen gets the same additional Power as the leftmost attacking ally's bonus Power from Hallowed. Example: If 5 units with Hallowed died this game, and *Renekton* is in the leftmost attacking position, Renekton will get +5 Power as the leftmost attacker, even though he doesn't have the Hallowed keyword. Because an ally is getting that buff, Gwen gets it too–she's attacking as an 8|4 unit that round.

- **Drain**: When she attacks, she also drains 2 from the enemy Nexus. That is, she deals 2 damage to the enemy Nexus and heals the ally Nexus for the same amount.

- **Level Up**: Every champion has their own unique condition to level up in game. In Gwen's case, it's when she deals a total of 10+ damage.

Numbers and icons along the border:

- **Top left number in the blue circle**: The mana cost to summon a card from your hand to put it in play on the board. Summoning Gwen costs 4 mana gems. (Note: In LoR, units can do combat in the same round that they are summoned.) See Mana.

- **Top right icon:** The region the card belongs to. Gwen belongs to The Shadow Isles. Your deck can contain up to two regions. (Note: Origins on regionless Runeterran champions can bend this rule.)

- **Bottom numbers:** The unit's attack Power (damage-dealing stat) is on the left and the unit's Health (defense stat) is on the right. Damage that a unit receives in battle persists to subsequent rounds, unless the unit has **Regeneration** or undergoes some other event or effect that removes any negative or positive buffs (like casting Spirit Journey, which revives the unit to its original state).

- **Lightning bolt icon:** When Gwen is in play, you'll also notice a lightning bolt icon. This generic trigger icon just means that the card has a trigger that an opponent may want to look at.

The card tells us all that, in much fewer words. Ah, word economy!

About this writing sample: Created this version in Dec 2022 and maintained till Sept 2023. (Rewrote all descriptions except the Fearsome keyword, which was already perfect in the previous version of the article.)

The article is very long, so I'll paste only my favorites here.

Keywords and Game Vocab | Legends of Runeterra

December 11, 2023 at 6:46 PM

Positive Keywords

These keywords are "positive" in that they buff units. Units can have multiple keywords.

Overwhelm

If the Power of an attacking unit with **Overwhelm** exceeds the defending unit's Health, the excess damage goes to the defender's Nexus.

- **When removing blockers:** Normally when a blocker is removed, the attacker receives and deals no damage. However, If an attacking unit with **Overwhelm** has its **blocker removed, all the damage goes through to the Nexus.**
- **Barrier:** Barrier doesn't prevent Overwhelm damage to the defender's Nexus.
    - Example: If you are blocking a 3|1 Overwhelm unit with a 1|1 Barrier unit, the damage allocated to the Barrier unit would be negated, but the Nexus will take the allocated other 2 damage.
- Overwhelm is only active when attacking (not when defending).

Scout

When you attack with *only* **Scout** units, you "ready your attack," meaning you will immediately regain the attack token after your Scout units attack.
Scout works only once per round.

Not generatable: When a card generates a random keyword, it cannot generate Scout.

- When you attack with only Scout units, your attack token is overlaid with the Scout icon so you know you're readying your attack.

- Scout is only available when attacking (not when defending).

Game Vocab: Activated Effects and Triggered Abilities

Abilities or effects that activate or trigger when some condition is met.

Level Up

Champions level up when their unique level-up condition is met. Once a champion levels up, all copies of them are leveled up.

.

"I've": Applies to that instance of the champion. For example, if you are trying to level up Twisted Fate ("I've seen you draw 9+ cards") and he dies before his level up condition is met, the counter resets: The next time a Twisted Fate is summoned, that instance will have seen 0 cards drawn.

"You've": This means you as the player this game, so the level up condition doesn't depend on an instance of a champion. For example, Ahri levels up when you, the player, have recalled 6+ units this game. Let's say you recall 3 units and then Ahri dies. Your "recalled units" counter is still at 3 even though she's off the board. If you recall 3 or more additional units by the time you summon her again, she'll be summoned as her leveled-up version because you (the player) have satisfied her level-up condition.

Origin

Regionless Runeterran champions each have a unique **origin**, which acts as a region. (Your deck can contain 2 total regions and/or origins.) Review the Runeterran champion's origin informational card to learn what cards you add to your deck at deckbuilding time.

- Origins can have unique effects during or before the game. (For example, Bard's origin, *The Wandering Caretaker*, has a **Round Start** effect.)
- Origin-as-region example: Kayn's origin, *The Shadow Reaper*, allows you to put any Cultist cards into your deck during deckbuilding. So for example, you could put all of these Cultist cards into your Kayn deck if you wanted to–even though there are 5 regions listed here–because his origin allows you to.

Play

To trigger a unit's **Play** trigger (Example: "Play: Grant an ally in hand +1|+0"), it must be played **from hand** to trigger its special effects.
So, creating a summoned card or reviving a card that has a **Play** effect won't trigger its Play effect because the card wasn't played from hand–that is, dragged from your hand to the board.

For example, if you use ***Marai Warden*** to summon *Crusty Codger*, *Crusty Codger*'s Play effect won't trigger because it wasn't played from hand.
